

MAP NOTES

VHS Positive Waters: the waters of Lakes Ontario, Erie and Huron (including Georgian Bay), their connecting waterways and adjacent tributaries up to the first impassable barrier for all fish species. Where fish are manually transferred over barriers or pass through a fishway, that barrier will not be considered to be impassable. Low head lamprey weirs or dams that do not normally stop salmonid passage also are not considered impassable. Waters associated with the Rideau Lakes/Trent Severn waterways are considered to be VHS free at the current time.

VHS Management Zone: The area bounded by the provincial road network, which encompasses the waters defined as VHS positive waters as per the above definition.

Lake Simcoe Management Zone: The area bounded by the provincial road network shown on the map.
